

Macintosh Compatibility

Virtual PC is a program designed to bring the Windows PC to your Mac. It can be purchased at all Apple Stores, online, and at some computer stores that sell Mac products.

The Virtual PC requirements are as follows:

- Mac G4 700 MHz and at least 512 ram or better;
- Mac OS X 10.3, 10.2.8, 10.4.2;
- External port to plug in a microphone.

When using Virtual PC, you must remember that your systems are completely separate. Your external ports will work only on Mac unless you enable them to

work on PC and they will only be recognized by one system at a time.
